Integration Component

4.10 INTEGRATION COMPONENT

The Integration Component provides an overview of the programs selected in the Source Reduction, Recycling, Composting, Special Waste, and Public Education components. The component demonstrates that an integrated solid waste management system has been developed drawing on a wide variety of techniques that will achieve the diversion mandates specified in Section 41780 of Division 30 of the Public Resources Code. In addition, the Integration Component contains an implementation table covering all tasks described in each component.

4.10.1 OVERVIEW OF PLANNED SOLID WASTE MANAGEMENT PRACTICES

The solid waste management programs outlined in the Source Reduction, Recycling, Composting, Special Waste, and Public Education components were designed and organized to facilitate efficient and effective achievement of the CoIWMP. Programs were selected based on their position in the integrated waste management hierarchy and on their ability to contribute to the overall diversion goals. Program feasibility and selection were based on detailed evaluation processes, experience, and local conditions. The type, source, and quantity of the materials targeted by the different diversion programs were reviewed to ensure that the source reduction, recycling, composting, and special waste programs were integrated and compatible. The following programs will most effectively reduce the amount of waste requiring disposal:

Source Reduction

- Local government source reduction programs
 - In-house paper efficiency program
 - Electronic information transfer
 - Waste exchange (SonoMax)
 - Green purchasing policy (joint purchase pools)
- Technical assistance, education, and promotion programs
 - Waste evaluations and audits
 - On-site composting programs
 - Technical assistance
 - Education
 - Social marketing
 - Public recognition
- Regulatory programs under consideration
 - Land use incentives/disincentives
 - Mandatory waste evaluation and reporting
 - Bans on products or packaging
- Economic incentives
 - Loans, grants, and loan guarantees
 - Deposits, refunds, and rebates
- Rate structure modification programs
 - Extended Producer Responsibility
 - Quantity-based end-user fees

Recycling

- Residential recycling activities
 - Single-family curbside recycling
 - Recycled goods procurement program
 - Drop-off / Buy-back centers
 - Multi-unit recycling
- Commercial recycling activities
 - Commercial collection
 - Office paper recycling
- Materials reuse/recovery operations
- Floor-sort activities
 - Special programs (e.g., phone book recycling, Christmas tree recycling, special events recycling)

Composting

- Composting
 - Yard debris composting
 - Source-separated organics composting
 - Resource management facility with MSW Composting

Special Wastes

- Construction and demolition material sorting
- Tire management
- White goods
 - Repair and reuse
 - Scrap metal salvaging
- Wood waste processing
- Litter abatement

Education

- Media relations (radio, PSAs, television, transit, newspaper, on-line, etc.)
- Community-based social marketing techniques
- Commercial/industrial strategy for waste diversion
- Outreach to non-English speaking populations
- Residential recycling promotional activities
- Commercial recycling promotional activities
- Buy-recycled education program
- School education program

Landfill Disposal

• Environmentally safe landfill disposal of wastes at permitted landfills.

4.10.2 INTEGRATION OF COMPONENTS

The components were integrated to maximize the diversion potential of all feasible source reduction,

recycling, and composting options. Preliminary integration and coordination of program alternatives was done in the program evaluation and selection stage. The compatibility of programs with other options was considered when recommending the implementation of a program. As of 2000, these programs have successfully diverted 40% of Sonoma County's waste stream from landfill disposal. The additional programs described in the components are anticipated to divert 50% of the waste stream by 2003 and more than 50% of the waste stream once all the described programs are implemented.

4.10.3 DETERMINATION OF COMPONENT PRIORITIES

Priorities for specific waste management programs has been set within the short-term (2003 to 2008) and medium-term planning periods (2009 to 2018). The following factors were used to determine priorities and timing among the programs identified in the components:

- Location of the component on the waste management hierarchy (i.e., source reduction, recycling and composting, and transformation and disposal)
- Ranking of the various programs reflected in each component
- Waste stream composition and the effectiveness of a program in addressing priority waste types
- Extent to which the program is already used and successfully operating
- Compatibility of the program with other programs

Using these factors, components and their diversion programs have been prioritized to best achieve the goals of integrated waste management.

4.10.4 ACHIEVEMENT OF DIVERSION MANDATES

In its 2000 Annual Report to the CIWMB, the SCWMA reported a diversion rate of 40 percent (see Table 4.2 for diverted tons for 2000). As required by PRC Section 41820(a)(6)(B), the SCWMA filed a time extension request listing the estimated diversion from new and enhanced diversion programs. By the year 2003, the SCWMA member jurisdictions will increase residential recycling by 6.5 percent and commercial recycling by 4.5 percent. The priority waste categories that will be targeted for diversion include paper, metal, wood, yard debris, and plastics. Specific programs that will be expanded and/or implemented to achieve the 50% diversion rate include:

- Residential curbside recycling: Evolution of source-separated residential curbside program from three 12-gallon stacking bins to single-stream automated collection in large wheeled toters. This program improvement is forecast to increase the tonnage of recyclables collected by 40% reflecting an additional estimated diversion of 30 tpd.
- <u>Multi-family recycling collection</u>: Collection of recyclable materials (paper, cardboard, glass, PETE and HDPE plastic food containers) in multi-family complexes. There are approximately 23,000 multi-family units in Sonoma County. Estimated new diversion is 10 tpd.
- <u>Beverage container recycling</u>: Provide collection containers for beverage container recycling at local parks, recreation centers, downtown areas, transit locations and other public areas and develop and implement recycling and public education at special events. Actual new diversion is anticipated to be less than 1% of the waste stream. The largest benefit of this program will be the educational value.

- Construction and demolition recycling facility: Facility would accept debris boxes from
 construction and demolition sites, providing an economic disincentive to encourage
 separation of material types (higher disposal fees for debris boxes that are not sorted).
 Material will be sorted by contractor for recycling. This new program is forecast to
 increase recyclable tonnage by an estimated 65 tpd.
- Yard debris collection and organics composting: Residential curbside collection of yard debris to be increased to weekly collection. Disposal site segregation of organic materials is included. Organic material is currently composted at the Central Disposal Site. This program improvement is forecast to increase diverted tonnage by 15% reflecting an additional estimated diversion of 25 tpd.
- Floor sorting/drop-off recycling at Central Disposal Site: The new operational improvements under construction at the Central Disposal Site include a 12-bin "Z" wall of recycling bins with a cardboard baler; separate recycling area for tires, metals, and appliances; material reuse and recovery area, household hazardous waste facility; and floor sorting of yard debris, wood waste and other recyclable materials in the new tipping building. These operational improvements are forecast to increase diverted tonnage by 30% reflecting an additional estimated diversion of 30 tpd.
- <u>Public Education</u>: Planning, implementing and follow-up analysis of a social marketing effort, including reviewing available data, designing and placing radio and print advertising, direct mail pieces and other techniques to increase residential recycling behavior, and completing a written evaluation of the campaign. Educational pieces developed by this campaign will be placed on the SCWMA website.

In addition, the Resource Management Facility described in the Composting Component is anticipated to increase the diversion level beyond the 50% mandate.

4.10.5 RECYCLING MARKET DEVELOPMENT ZONE

In 1994 Sonoma and Mendocino Counties were designated as a Recycling Marketing Development Zone (RMDZ). In 1997, a redesignation was requested from the CIWMB to include Lake County, the current Zone Administrator. The RMDZ targets the following materials for feedstock: paper, glass, organics, construction and demolition debris, plastics, paint, and tires.

The Sonoma County Economic Development Board provides assistance services directed toward encouraging the startup, retention and expansion of Sonoma County businesses and jobs, particularly with small businesses; creation of new jobs and employment opportunities. The Sonoma County Business Environmental Alliance, working to promote the voluntary adoption of good environmental practices by local businesses and farms, periodically produces reports, newsletters, and other projects as a resource to businesses. Consulting services are available through the Redwood Empire Small Business Development Center, the Service Corps of Retired Executives Association, and the Private Industry Council. Additional financial incentives include Sonoma County Industrial Development Bonds and Small Business Administration loan program.

Mendocino County offers other incentives through the City of Willits such as the Development Center, the Ukiah Business Development Center, Community Block Grant loans, and Industrial Development Bonds. Other economic development tools include expedited permit processing, general plan and zoning amendments, business counseling and management assistance, and private loans through local banks.

In Lake County, the Lake County Business Outreach and Response Team, a local economic development

corporation, is responsible for coordinating local incentives and maintains a very active network of local, State, and federal service providers. Community Development Services, a local economic development consulting firm, provides administrative support to the Lake County Business Outreach and Response Team.

4.10.6 MEETING THE 15-YEAR DISPOSAL REQUIREMENTS

The SRRE recommends programs that will reduce the amount of waste requiring disposal over the next 15 years. Any solid waste that is not diverted by the recommended programs will be landfilled at the Central Disposal Site. The Facility Capacity Component calculated the capacity required based on the 1992 Waste Generation Study and the 1995/96 Waste Characterization Study, reasonable assumptions about waste management practices and trends, and the available landfill capacity. The facility capacity calculations indicate that capacity is available until 2018.

4.10.7 REGIONAL IMPLEMENTATION OF DIVERSION PROGRAMS

Many of the programs described throughout the SRRE are regional programs, including yard debris composting, wood waste processing, and beverage container recycling, that are most efficiently and cost-effectively performed through a regional system. Regional education and public information programs support source reduction activities, drop-off and buy-back centers, single and multi family residential recycling, commercial recycling, tire and white goods reuse and recycling, and the materials reuse and recovery facility. Cities will continue to be responsible for the single and multi family residential recycling programs operated by their franchised haulers.

4.10.8 IMPLEMENTATION SCHEDULE

The integrated implementation schedule for the new and expanded programs is compiled from the implementation schedules developed for the Source Reduction, Recycling, Composting, Special Waste, and Public Education components. Table 4-46 shows the required annual activities including key implementation tasks for new and expanded programs, responsible entities for each task, funding sources, and task start and milestone dates. Table 4-43 (Facility Component) includes the anticipated diversion rate for each year of the 15-year period.
